

ProBlock

300 Hybrid Media

Product Description

Galaxy Pro Block 300 Hybrid Media is a lightly textured, white-faced printable material which is predominantly suitable for use as a retractable banner stand printable media when a high-quality anti-scratch finish is required. It has a grey back which adds opacity to the product when used with standard lighting conditions.

The multi-polymer construction gives a good balance of printability and dimensional stability. Because of the thickness (230 microns), this product is also suitable for over-lamination with a suitable PVC based over-lamination film which has a high tack plasticizer resistant adhesive which is at least 28 microns thick in order to fully occupy the troughs in the textured surface.

Advantages

- ✓ Anti-scratch finish
- ✓ Block out
- ✓ Stay flat

Applications

- ✓ Retractable banner stands
- ✓ Indoor signage
- ✓ Outdoor signage
- ✓ Trade show panels

Ink Compatibility: L S ES UV
